

Stamp Here - End of Roll

We suggest that for stamping purposes a large letter size rubber stamp be used, approx. 2"x4". A stamp pad impregnated with Black Higgins India ink is also recommended, and sufficient time for drying should be allowed before winding up the film. The impression should be made at least 2" from the cut to allow us some measure of tolerance for proper squaring and splicing.

Tail of Roll

This part goes to processing lab.

Test footage removed by Customer from tail of roll.

Test footage removed by Customer from start of roll.

If it is necessary for test footage to be removed from the start of the roll, a stamp here indicates that this is the beginning of the roll sent for processing.

This part goes to processing lab.

Start of Test

End of Test Sec.

If it is absolutely necessary for test footage to be removed from within the roll, two stamps should be used to indicate the start and end of the section removed.  
1. Start of test section.  
2. End of test section.
